INT. J. CONTROL, 1995, VOL. 62, NO. 6, 1523–1525

SUBJECT INDEX (Vol. 62)

Adaptive control
  of a class of nonlinear discrete-time systems, 303
  of linear unstructured time-varying systems, 527
Affine nonlinear systems with non-matching uncertainties, variable-structure controller, 917
Algorithm, *XY*-centring, for the dual LMI problem, new approach to fixed-order control design, 1257
Algorithms
  a dual look at unit interpolation in H_∞, 813
  fixed parameter type, self-tuning prediction and control of 2D processes, 65
  power methods for calculating eigenvalues/eigenvectors of spectral operators on Hilbert spaces, 1117
  realizations for nonlinear input–output systems, 941
  square-root RTS smoothing type, 1049

Bifurcation analysis via harmonic balance in periodic systems with feedback structure, 1507

Cayley–Hamilton theorem, generalized, for polynomial matrices with arbitrary degree, 1341
Communication network with queues used for closed-loop control, 493
Continuous nonlinear systems
  optimal predictive control, 633
  parameter identification, PMGOP method, 349
Continuous-time systems, nonlinear, identification using Hartley modulating functions, 1431
Control
  adaptive
    of class of nonlinear discrete-time systems, 303
    of linear unstructured time-varying systems, 527
  and parallel signal processing architectures, design, using graph reversal, 271
  closed-loop, of systems over a communication network with queues, 493
  design, robust, for SISO systems, based on constrained optimization, 477
  digital, robust, of systems with time delay, Smith predictor revisited, 325
  fuzzy, decentralized, of multivariable systems by active decomposition of control laws, 781
  internal model type with improved disturbance rejection, 983
  model reference robust type, design using state-space techniques, 1061
  multivariable, with coloured measurement noise, polynomial optimization, variational approach, 191
  multivariable, with coloured noise at controller output, variational approach to polynomial optimization, 1037
  optimal nonlinear continuous feedback type, of systems with saturating actuators, 1209
  optimal, predictive, of continuous nonlinear systems, 633
  problems, time-optimal, for the swing and the ski, 1409
  receding horizon type, and discontinuous state feedback stabilization, 1217
  robust
    of discretized continuous systems using theory of sliding modes, 209
    of MIMO nonlinear systems with mismatched uncertainty, 961
    time-delay type, of multimode systems, 1319
  saturation, closed-loop stability, 619
  self-tuning, and prediction, for 2D processes
    fixed parameter algorithms, 65
    parameter estimation, set-point tracking and offset handling, 239
  switching strategy for power system stabilization problem, 1021
  systems, non-holonomic, from steering to stabilization with sinusoids, 849
Controllability, regional, of distributed parameter systems, 1351
Controller
  PI optimal, of laboratory drive system, 511
  global sliding-mode type, for motor drive with bounded control, design, 1001
  variable structure type, for affine nonlinear systems with non-matching uncertainties, 917
Controllers
  nonlinear, for optimal asymptotic robust performance, 1367
  robust, for nonlinear uncertain systems, systematic design, 871

Descriptor systems, exact pole assignment with regularity by output feedback, 379, 413
Design
  for model reference robust control using state-space techniques, 1061
  of a global sliding-mode controller for a motor drive with bounded control, 1001
  of control systems, principle of matching, a necessary and sufficient condition for inputs restricted in magnitude and rate of change, 893
  of fixed-order control, *XY*-centring algorithm for dual LMI problem, 1257
  of high-gain feedback for nonlinear systems with unmatched uncertainties, systematic, 1471

of robust control, for SISO systems, based on constrained optimization, 477
of robust state analytical predictor for general class of deadtime processes, 651
optimal feedback loop-shaping for systems with large parameter uncertainty via linear programming, 557
parallel control and signal processing architectures, graph reversal, 271
systematic, of robust controllers for nonlinear uncertain systems, 871
Digital control, robust, of systems with time delay, Smith predictor revisited, 325
Discrete-time linear system, constrained, stabilization with assigned initial condition set, 601
Discrete-time systems, nonlinear, adaptive control, 303
Discrete-time universal regulator, 17
Discretized continuous systems, robust control using sliding mode theory, 209
Distributed parameter systems, regional controllability, 1351
Drive system for use in laboratory, practical identification and PI optimal controller, 511

Eigenvalues assignment by a particular Lyapunov-type equation, 1231

Fault diagnosis scheme, robust, based on signal modal estimation, 461
Feedback design, optimal loop-shaping for systems with large parameter uncertainty via linear programming, 557
Feedback, high-gain, for nonlinear systems with unmatched uncertainties, systematic design, 1471
Frequency-domain approach, simplified, to super-optimization, 1453
Fuzzy control, decentralized, of multivariable systems by active decomposition of control laws, 781

Graph reversal and the design of parallel control and signal processing architectures, 271

H_∞, a dual look at unit interpolation, 813
Hilbert spaces, eigenvalues/eigenvectors of spectral operators, power calculation method, 1117

Identification
q-Markov Cover method, using pseudo-random binary signals, 1273
closed-loop system, using the dual Youla control parametrization, 1175
of a class of nonlinear continuous-time systems using Hartley modulating functions, 1431
of nonlinear system using neural state space models, applicable to robust control design, 129
practical, and PI optimal controller of a laboratory drive system, 511
technique for linear periodic state-space models, 289
Integro-differential equations, nonlinear mapping to a generalized describing function form, 1145
Interactors, invariant properties, 1247
Inverse problem of linear dynamic system with noise, 1291

LQ-optimization, a cautionary tale, 767
Learning control reinforcement using interconnected learning automata, 1
Linear dynamic system with noise, inverse problem, 1291
Lyapunov functions derivation for nonlinear systems, extended integral method, 717
Lyapunov-type equation, eigenvalues assignment, 1231

Mapping nonlinear integro-differential equations to a generalized describing function form, 1145
Matrices, interval type, robust stability, computational approach 1491
MIMO nonlinear systems with mismatched uncertainty, robust control, 961
Model following, and robust tracking, for uncertain time-delay systems, 589
Model reduction with balanced realizations, 33
Model validation tests for multivariable nonlinear models including neural networks, 749
Model-matching problem, simplified frequency-domain approach to super-optimization, 1453
Models
linear periodic state-space type, identification technique, 289
nonlinear, based on term clustering, improved structure selection, 569
Motor drive with bounded control, global sliding-mode controller design, 1001
Multimode systems, robust time-delay control, 1319
Multiple time-delay singularly perturbed nonlinear systems, global exponential stabilizability, simple criterion, 1197
Multivariable nonlinear models, validation tests, 749
Multivariable systems, decentralized fuzzy control by active decomposition of control laws, 781

Neural networks
multivariable nonlinear model validation tests, 749
parameter estimation by criterion minimization, 1391
Neural state space models used for nonlinear system identification, applicable to robust control design, 129
Nonlinear input–output systems, realizations of algorithms, 941
Nonlinear system identification using neural state space models, applicable to robust control design, 129
Nonlinear systems
extended integral method to derive Lyapunov functions, 717
stabilization by qualitative feedback controllers, 109
structured dissipativeness and absolute stability, 443

trajectory tracking via nonlinear reduced-order observers, 685
Nonlinear/uncertain dynamic systems with bounded controllers, practical stabilization, 153

Observation functionals, admissibility, 1161
Observers, nonlinear, reduced-order, trajectory tracking in nonlinear systems, 685

Parameter estimation
overtraining, regularization and searching for a minimum, with application to neural networks, 1391
set-point tracking and offset handling, self-tuning prediction and control of 2D processes, 239
Parameter identification for class of continuous nonlinear systems, PMGOP method, 349
Periodic systems with feedback structure, bifurcation analysis via harmonic balance, 1507
Pole assignment, exact, with regularity, by output feedback, descriptor systems, 379, 413
Polynomial matrices with arbitrary degree, generalized Cayley–Hamilton theorem, 1341
Poorly-known systems, long-range prediction, 227
Power methods for calculating eigenvalues and eigenvectors of spectral operators on Hilbert spaces, 1117
Power system stabilization problem, switching control strategy, 1021
Prediction, long-range, for poorly-known systems, 227
Predictor, robust state, analytical, design for class of deadtime processes, 651

q-Markov Cover identification using pseudo-random binary signals, 1273

Regulator
β-predictive type, 799
universal, discrete-time, 17

Sampled-data systems, computation-oriented expression of non-conservative condition for robust stability, 1085
Self-tuning prediction and control for 2D processes
fixed parameter algorithms, 65
parameter estimation, set-point tracking, offset handling, 239
Signal processing, and parallel control architectures, design using graph reversal, 271
SISO systems, robust control design based on constrained optimization, 477
Ski, time-optimal control problems, 1409
Sliding mode stabilization of uncertain systems using only output information, 1129
Stability
absolute, and structured dissipativeness, of nonlinear systems, 443
closed-loop, in the presence of control saturation, 619
practical, with settling time via vector norms, 173
robust
of interval matrices, a computational approach, 1491
of sampled-data systems, computation-oriented expression of non-conservative condition, 1085
Stabilizability
global, exponential, of nonlinear multiple time-delay singularly perturbed systems, simple criterion, 1197
test by constant output-feedback, 1239
Stabilization
by output feedback using variable structure control, 831
constrained, with assigned initial condition set, 601
discontinuous state feedback type, and receding horizon control, 1217
of nonlinear systems by qualitative feedback controllers, 109
practical, of nonlinear/uncertain dynamic systems with bounded controllers, 153
robust, related to the Popov stability criterion, 1105
sliding mode type, of uncertain systems, using only output information 1129
State-space formulas for computation of gap between graphs of rational transfer functions, 737
Super-optimization, simplified frequency-domain approach, 1453
Swing, time-optimal control problems, 1409

Time-invariant linear systems, finding transfer function without computing $(sI - A)^{-1}$, 1517
Time-varying systems, unstructured, linear, adaptive control, 527
Tracking, robust, and model following, for uncertain time-delay systems, 589
Trajectory tracking in nonlinear systems via nonlinear reduced-order observers, 685
Transfer function of time invariant linear system, search without computing $(sI - A)^{-1}$, 1517
Transfer functions, rational, computation of gap between their graphs, state-space formulas, 737

Uncertain systems, sliding mode stabilization using only output information, 1129
Uncertain time-delay systems, robust tracking and model following, 589

Variable structure control used for output feedback stabilization, 831
Variational approach to polynomial optimization of multivariable control with coloured measurement noise, 191
Variational approach to polynomial optimization of multivariable control with coloured noise at controller output, 1037

INT. J. CONTROL, 1995, VOL. 62, NO. 6, 1527–1529
